190 COUNTRIES AND TERRITORIES

600
COMPANY-OWNED
AND INDEPENDENT
DISTRIBUTOR
FACILITIES **+7,200**
DEALER LOCATIONS

THEIR MISSION

To exceed customer expectations by always being first to market with the best products.

THE BUSINESS CHALLENGE

For global shippers like Cummins, managing huge numbers of global and local carriers can be extremely challenging and time consuming.

Cummins had difficulty managing carrier information and shipment specifications. Producing shipping labels and transmitting shipping information according to each carrier's specifications was very challenging.

Cummins needed to take control of their shipping, streamline operations and improve warehouse efficiency.

THE SOLUTION

GSA | XE

> Real time production of shipping labels and shipment consolidation helped Cummins to improve warehouse efficiency. Labels are produced the moment the package is created, reducing process time and labeling errors.

> Before labels are produced, GSA performs a number of shipment validation checks in the background:

- whether the ship to address is valid or
- if the weight and dimensions are within the restrictions of the carrier being used.

> GSA produces error labels for invalid shipments and offers the user advice on the actions that need to be taken for accurate shipping.

> GSA offers real time instant freight calculations so that actual freight costs can be added to sales invoices. This feature helps Cummins to monitor freight costs and check the accuracy of carrier freight invoices.

> GSA enables Cummins to produce carrier manifests and freight letters (CMR) at the end of each day, providing them with the information they need when they need it.

THE RESULTS

> Process times have been reduced and labeling errors rarely occur since introducing real time label printing.

> Tracking events are automatically downloaded from carrier servers. The Cummins team now have full visibility on the latest status of every shipment, which allows them to share status information with their customers and improve the service they provide to them.

> Actual freight costs are now added to the sales invoice as a result of Logistyx's real time freight cost calculation, making invoicing a much more efficient process.

The Logistyx team have a good understanding of our business. They understand the order management system and the warehouse management system which makes it a very easy working relationship as they understand our technical expectations.
